

Student Technology Policy

The practice of a professional massage therapist is heavily dependent on the technology. At NLSM we employ a wide range of software to provide everything from scheduling to instruction. As of current writing the vast majority of testing is done using online software. Students will access schedule and other important information along with some classes through the Internet. All students are required to have available a suitable device in order to complete their studies and coursework.

Acceptable devices ;

Any Internet device the student can work comfortably at is acceptable. NLSM software supports Windows™, iOS™, Android™, Chromebook OS™. Our experience has been that laptops are the preferred device by most students. If you do not have a device the school will provide one at an additional cost. All software and school activities can be accomplished on a Chromebook™, and one will be provided for an additional \$ 250.00.

“In-Class” vs “Online”

Some activities, testing, workbooks a some classes are done “Online”, and if completed “offsite” from the school qualify as “Online Hours” and are counted toward total Hours Earned.
